

## IN THE CLAIMS:

1. (Original) A replaceable sliding cover unit for a folder-type phone having a main body, a folder, a hinge device for rotatably connecting the folder to the main body, and a display, comprising:
  - a slot formed around the periphery of the folder;
  - a replaceable sliding cover having at least one raised edge for mating with the slot to cover the upper portion of a folder, and detachable from the folder by sliding the replaceable sliding cover in the length direction of the folder-type phone; and
  - a locking unit for fixing the cover in the slot.
2. (Original) The replaceable sliding cover unit of claim 1, further comprising a transparent window positioned to enable viewing of the display when the replaceable sliding cover is mounted to the folder.
3. (Original) The replaceable sliding cover unit of claim 1, wherein the locking unit comprises: a groove formed along the slot; and protrusions formed at the periphery of the cover to mate with the groove.
4. (Original) The replaceable sliding cover unit of claim 1, wherein the locking unit comprises: protrusions formed to face each other at both sides of the folder case; and grooves at positions of the raised edge corresponding to the protrusions.
5. (Currently Amended) The replaceable sliding cover unit of claim 45, wherein the protrusions are formed near a center hinge arm of the folder.
6. (Original) The replaceable sliding cover unit of claim 1, wherein the locking unit comprises:
  - a plate spring having a fixed end fixed to a bottom surface of the folder and a free end having a protrusion, the protrusion disposed through an opening of the folder to move up and down according to whether the replaceable sliding cover is detached from the folder or mounted onto the folder; and

an opening formed at a predetermined position of the replaceable sliding cover to mate with the protrusion of the free end so that the replaceable sliding cover is secure to the folder.

7. (Original) The replaceable sliding cover unit of claim 6, wherein the plate spring further comprises a guide protruded from the bottom surface of the folder case to guide the motion of the plate spring.
